

Computer Architecture Lab6 CS322 Report

Name : Chandrawanshi Mangesh Shivaji

Roll No : 1801CS16

Date : 23/10/2020

Task 1a : Comparison of C and Assembly version of Multiplication Functions

gcc -m32 -o2 -o c.out mult16m.c mult16c.c

./c.out

C version

<u>Number of Calls (in millions)</u>	<u>Time (in seconds)</u>
1	0.054495
2	0.106635
5	0.262313
10	0.524121
20	1.042403
40	2.088936
60	3.122334
80	4.164502
100	5.206474

```
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ gcc -m32 -o2 -o c.out mult16m.c mult16c.c
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 1
Multiplication took 0.054495 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 2
Multiplication took 0.106635 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 5
Multiplication took 0.262313 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 10
Multiplication took 0.524121 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 20
Multiplication took 1.042403 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 40
Multiplication took 2.088936 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 60
Multiplication took 3.122334 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 80
Multiplication took 4.164502 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ ./c.out
Please input repeat count: 100
Multiplication took 5.206474 seconds to finish.
mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$
```

```
gcc -m32 -o2 -o asm.out mult16m.c mult16inline.c  
./asm.out
```

AL version

mangesh2102000@Linux-Ubuntu:~/Documents/Lab6/Task1$ █
```

Graph 1 a

Fig. Comparision Graph C and AL mult

So, from above graph we can conclude that assembly works faster than its equivalent C implementation. Here, both curves are linear in nature. But slope for C is greater is than corresponding Assembly implementation.

Task 1 b : Comparison of C and Assembly version of Factorial Functions

```
gcc -std=c99 L6_factorial.o L6_factorial_main_t_c.c  
./a.out
```

C version

Graph 1 b

Fig. Comparision Graph C and AL fact

So, from above graph we can conclude that assembly works faster than its equivalent C implementation for factorial function. Here, both curves are exponential in nature, But the constant factor for Assembly is lesser than its C counterpart.

From 1a and 1b, we can infer that for speed optimization it will be better if we write important functions in Assembly than any other high level language like C. Though it comes with a difficult implementation and also reduces code readability.

Task 2 : A 64-bit NASM program and a C program for implementing x^y functionality

Algorithm :

if $y < 0$, tell user that negative exponent is not allowed

if $y == 0$, ans is always 1

if $y > 0$, First store x in some variable (let us say in ans)

Then loop $(y-1)$ times, in each iteration multiply ans by x

Now, we have x^y stored in ans

Command for running 64-bit NASM Program :

```
$ nasm -felf64 lab6.asm && gcc -o lab6 lab6.o -static
```

```
$ ./lab6 num1 num2
```

where num1 is base and num2 is exponent

```
mangesh2102000@Linux-Ubuntu:~/Documents$ nasm -felf64 lab6.asm && gcc -o lab6 lab6.o --static
mangesh2102000@Linux-Ubuntu:~/Documents$ ./lab6 5 3
125
mangesh2102000@Linux-Ubuntu:~/Documents$ ./lab6 25 0
1
mangesh2102000@Linux-Ubuntu:~/Documents$ ./lab6 35 -2
The exponent may not be negative
```

Command for running C Program :

```
$ gcc lab6.c
```

```
$ ./a.out
```

after this user will be prompted for input accordingly

```
mangesh2102000@Linux-Ubuntu:~/Documents$ gcc lab6.c
mangesh2102000@Linux-Ubuntu:~/Documents$ ./a.out
Enter Number : 5
Enter Exponent : 3
Answer is : 125
mangesh2102000@Linux-Ubuntu:~/Documents$ ./a.out
Enter Number : 25
Enter Exponent : 0
Answer is : 1
mangesh2102000@Linux-Ubuntu:~/Documents$ ./a.out
Enter Number : 35
Enter Exponent : -2
The exponent may not be negative
```
